

# GS1 Data Source

Guideline for choosing the right packaging type

*Release 1.7, Ratified, 14 August 2021*

## Document Summary

| Document Item        | Current Value                                   |
|----------------------|---|
| Document Name        | GS1 Data Source                                 |
| Document Date        | 14 August 2021                                  |
| Document Version     | 1.7   |
| Document Status      | Ratified  |
| Document Description | Guideline for choosing the right packaging type |

## Log of Changes

| Release | Date of Change | Changed By       | Summary of Change                            |
|---------|----------------|------------------|--|
| 1.6     | 23-2-2018      | Sarina Pielaat   |  |
| 1.7     | 14-8-2021      | Frederieke Vlieg | Added new packaging type code 'Wire' (WIRE). |

## Disclaimer

GS1, under its IP Policy, seeks to avoid uncertainty regarding intellectual property claims by requiring the participants in the Work Group that developed this document to agree to grant to GS1 members a royalty-free license or a RAND license to Necessary Claims, as that term is defined in the GS1 IP Policy. Furthermore, attention is drawn to the possibility that an implementation of one or more features of this Specification may be the subject of a patent or other intellectual property right that does not involve a Necessary Claim. Any such patent or other intellectual property right is not subject to the licensing obligations of GS1. Moreover, the agreement to grant licenses provided under the GS1 IP Policy does not include IP rights and any claims of third parties who were not participants in the Work Group.

Accordingly, GS1 recommends that any organization developing an implementation designed to be in conformance with this Specification should determine whether there are any patents that may encompass a specific implementation that the organization is developing in compliance with the Specification and whether a license under a patent or other intellectual property right is needed. Such a determination of a need for licensing should be made in view of the details of the specific system designed by the organization in consultation with their own patent counsel.

THIS DOCUMENT IS PROVIDED "AS IS" WITH NO WARRANTIES WHATSOEVER, INCLUDING ANY WARRANTY OF MERCHANTABILITY, NONINFRINGEMENT, FITNESS FOR PARTICULAR PURPOSE, OR ANY WARRANTY OTHERWISE ARISING OUT OF THIS SPECIFICATION. GS1 disclaims all liability for any damages arising from use or misuse of this Standard, whether special, indirect, consequential, or compensatory damages, and including liability for infringement of any intellectual property rights, relating to use of information in or reliance upon this document.

GS1 retains the right to make changes to this document at any time, without notice. GS1 makes no warranty for the use of this document and assumes no responsibility for any errors which may appear in the document, nor does it make a commitment to update the information contained herein.

## 1 Packaging types

When entering data in GS1 Data Source you can choose a relevant code for the packaging of your product. This overview helps you to choose the right code.

| Name                  | Example   | GDSN code | Description   |
|-----------------------|---|-----------|---|
| <b>Aerosol</b>        |    | AE        | A gas-tight, pressure-resistant packaging with a valve and propellant gas. When the valve is opened, the pressure will force out the product from the package as a (fine) spray or stream (for example, a spray can may contain deodorant or pressurized hair spray). Atomisers are not included, because they are not pressurised to push the product out of the package.                            |
| <b>Ampoule</b>        |    | AM        | A relatively narrow packaging, consisting of a glass or plastic tube, of which one end is pulled into a stem and melted closed after filling. The bottom of an ampoule may be flat, convex or oval. An ampoule is opened by breaking off the stem.  |
| <b>Bag</b>            |   | BG        | A preformed, flexible packaging, usually only open on one side, the opening of which may or may not be closed after filling.  |
| <b>Bag in Box</b>     |  | BBG       | Bag-in-Box or BIB is a type of packaging for handling or transporting liquids. It consists of a sturdy bag, usually in aluminium, PET foil or some other synthetic material, placed inside a cardboard box. The container and internal bag may be fused. In most cases a nozzle or valve is attached to the bag. The nozzle may be connected to a dispenser or the valve allows convenient dispensing |
| <b>Banded package</b> |  | X11       | Used to tie or wrap products or packaging together in order to hold the unit together.  |

| Name                | Example   | GDSN code | Description  |
|---------------------|---|-----------|--|
| <b>Barrel</b>       |    | BA        | A cylindrical packaging with a permanently attached bottom with a top that may or may not be removable.  |
| <b>Basket</b>       |    | BK        | A semi-rigid package, usually open at the top, which you can use traditionally for collecting, transporting and selling agricultural products.   |
| <b>Blister pack</b> |   | BPG       | A type of packaging where the item is packaged between a preformed 'blister' (usually made of transparent plastic) and a cardboard 'carrier'. These may be attached to each other by means of staples, heat welding, gluing or in some other way. In some cases, the blister packaging is completely wrapped around the product like an oyster shell. Blister packs are usually made from polyvinyl chloride by thermoforming, but almost any thermoplastic may be formed into a blister.                    |
| <b>Bottle</b>       |  | BO        | A packaging with a round neck whose diameter is smaller than that of the body, with an opening that may be closed with a cap to preserve the contents. More specifically: a packaging with a narrow neck compared to a pot or packaging with a wide opening. The diameter of the bottle may be round, oval, square, rectangular or a combination of these. Bottles are usually made of glass or plastic, but of earthenware or metal as well. Bottles may be recyclable, returnable, reusable or single use. |
| <b>Box</b>          |  | BX        | A non-specific term referring to a non-flexible, three-dimensional packaging with closed sides completely enclosing the contents and may be made of any material. Although some boxes are suitable for reuse or reclosing, they may also be single use, depending on the product hierarchy.  |

| Name          | Example   | GDSN code | Description   |
|---------------|---|-----------|---|
| <b>Brick</b>  |    | BRI       | A rectangular, stackable packaging that is primarily intended for liquids such as milk and fruit juice.                                     |
| <b>Bucket</b> |    | BJ        | A usually cylindrical packaging, possibly equipped with a lid and handle (made of metal, plastic or other suitable material).               |
| <b>Cage</b>   |   | CG        | A container that is closed on at least one side with wire or bars, so that air and light can enter.   |
| <b>Can</b>    |  | CNG       | A metal, usually cylindrical packaging of undetermined size. This is used for products in consumer quantities and institutional quantities. |
| <b>Card</b>   |  | CM        | A flat packaging on which the product is mounted or is attached to for presentation purposes.   |

| Name              | Example   | GDSN code | Description  |
|-------------------|---|-----------|--|
| <b>Carton</b>     |    | CT        | A non-specific term for a resealable packaging commonly used for perishable food (e.g. eggs or fruit).   |
| <b>Cartridge</b>  |    | CQ        | A package that is an exchangeable part of a device (for example, a printer). It contains an object or substance that is suitable for insertion into a device / other object (printer / glass). Examples are ink or lemonade syrup.   |
| <b>Case</b>       |    | CS        | A non-specific term for a package that is used to contain, enclose and / or protect contents during distribution, storage and / or presentation. Covers are usually intended to keep products in good condition throughout their lifecycle. Examples are: CD cases, makeup boxes, spectacle case.  |
| <b>Clam Shell</b> |   | CMS       | A package consisting of two halves that are connected to each other by a hinged part. This hinged part ensures that you can move both halves towards each other and close them. The shape of this package may vary.  |
| <b>Crate</b>      |  | CR        | A non-specific term that usually refers to a non-flexible, three-dimensional package with partially closed sides. Used for packaging items for transport or storage. Crates' tops may be open or closed and may contain internal compartments. Although some crates are suitable for reuse or reclosing, they can also be single use. This depends on the product hierarchy. |

| Name  | Example   | GDSN code | Description   |
|---|---|-----------|---|
| <b>Cup\Tub</b>                              |    | CU        | A flat-bottomed packaging with an underside or undetermined shape that may or may not be closed with a member. This type of packaging is usually made of paper, plastic or different materials and usually (but not always) used for food such as: ice cream, margarine, yogurt, sour cream, candy, etc.                |
| <b>Cylinder</b>                             |    | CY        | A non-flexible, cylindrical packaging with straight sides and circular ends of equal size.  |
| <b>Envelope</b>                             |   | EN        | A usually flat packaging of flexible material with only two surfaces, connected to each other on three sides to form a cover. The open side may be used to fill the packaging. It may be closed afterwards using a self-adhesive flap, heat seal, string, metal clamp or other seal. A valve enables convenient dosing. |
| <b>Flexible Intermediate Bulk Container</b> |  | ZU        | A flexible container that is used for transporting and storing liquids or other bulk material. The container's shape and the material it is made of are based on the container's requirements.  |
| <b>Gable Top</b>                            |  | GTG       | A rectangular, non-stackable packaging that is primarily intended for liquids such as milk and fruit juice.   |

| Name  | Example   | GDSN code | Description   |
|---|---|-----------|---|
| <b>Intermediate Bulk Container, rigid plastic</b> |    | AA        | This type of container is connected to a pallet when used or is built in at the bottom of the container and is therefore permanently attached to it. The container is used for transporting and storing liquids or other bulk materials. The container's shape and the material it is made of are based on the container's requirements. Therefore, different variants are available. |
| <b>Jar</b>  |    | JR        | A non-flexible packaging with a large opening, made of glass, stone, earthenware, plastic or other suitable material. This is used to store products (for example, jam or cosmetics, facial cream, pickles).<br>Please note: the codes for jars (JR) and pot (PT) are interchangeable, apart from flower and herb pots that are always called pot (PT).                               |
| <b>Jug</b>  |   | JG        | A reservoir, usually cylindrical, with a handle and / or spout for containing and pouring out liquids.  |
| <b>Multipack</b>                                  |  | MPG       | A bundle of products that are held together by the packaging for the consumer's convenience. A multi-pack is always a consumer unit. With the exception of items that are held together by a packaging strap.   |
| <b>Net</b>  |  | NT        | A package with an open structure of threads or strips, woven in a regular pattern with openings between the threads. The packaging is intended for holding or carrying products.  |
| <b>Not packed</b>                                 |  | NE        | The item is supplied without packaging or 'unpacked'.   |

| Name                       | Example   | GDSN code | Description   |
|----------------------------|---|-----------|---|
| <b>Packed, unspecified</b> |   | PUG       | The packaging of the product (or products) is currently not listed. Use this code if no suitable options are available and only when a change proposal has been approved for the relevant package type.   |
| <b>Pallet</b>              |    | PX        | A platform used to store or transport cargo units on.   |
| <b>Pallet Box</b>          |    | PB        | A crate to which a pallet platform is permanently linked or which requires a pallet platform to be used and stored. You cannot use the pallet crate without a pallet platform. Submit the characteristics of the pallet platform based on the characteristics in the pallet type code list.   |
| <b>Peel Pack</b>           |   | PLP       | A packaging intended for sterile products that can be torn open without touching the product.   |
| <b>Pot</b>                 |  | PT        | <p>Packaging with a flat bottom without a fixed shape (round, square, triangular etc.). The packaging may have a lid, but doesn't have to. Pots are usually made of cardboard, plastic, ceramics, metal or other materials and can be used for various products: cosmetics, food / liquids, dairy products, plants.</p> <p>Please note: the codes for bus (JR) and pot (PT) are interchangeable, apart from flower and herb pots that are always called pot (PT).</p> |
| <b>Pouch</b>               |  | PO        | A preformed, flexible packaging usually sealed with a seam at the bottom. May be placed upright on a shelf.   |

| Name                 | Example   | GDSN code | Description  |
|----------------------|---|-----------|--|
| <b>Rack</b>          |    | RK        | A non-specific term for a frame or stand used to move, place, hang or store products. Often equipped with wheels and mainly used in logistics for delivery of items such as hanging clothing items or items on shelves, such as dairy products, bakery products and flowers.                         |
| <b>Reel</b>          |    | RL        | A core around which wire, cable, film, etc. are wound. A coil is usually provided with side flanges and is used in shipping and processing   |
| <b>Roll</b>          |   | RO        | A flexible, cylindrical packaging with straight sides and circular ends of equal size. The ends are not provided with flanges (such as with a coil). A roll may consist of one or multiple layers of packaging (such as rusk).   |
| <b>Shrinkwrapped</b> |  | SW        | A packaging consisting of a plastic foil enclosing a product or group of products, heated so that it shrinks and keeps the unit together. Shrink-wrap is used to tightly wrap a packaging or loading unit so that it is tied together, protected and immobilized for further processing or shipment. |
| <b>Sleeve</b>        |  | SY        | A flexible packaging with open sides usually made of paper, cardboard or plastic, which is slid over the content for protection or presentation.   |

| Name                  | Example   | GDSN code | Description  |
|-----------------------|---|-----------|--|
| <b>Stretchwrapped</b> |    | STR       | A packaging consisting of plastic foil with a high elastic capacity that is stretched and wrapped around a product or group of products. Stretch film is used to tightly wrap a packaging or loading unit so that it is tied together, protected and immobilized for further processing or shipment. |
| <b>Tray</b>           |    | PU        | A usually shallow packaging, with or without a cover, used to move or display products.  |
| <b>Tube</b>           |    | TU        | A cylindrical packaging that is sealed on one side and closed on the other using a cap or dosing device.   |
| <b>Wire</b>           |   | WIRE      | A packaging made of a non-specific material in the form of very flexible thread or slender rod.  |
| <b>Wrapper</b>        |  | WRP       | Packaging of (a part of) products with one or more layers of flexible packaging materials (e.g. separately packaged ice cream). This does not include products in shrink or vacuum packaging, or stretch packaging.  |

Table 1.1: examples and descriptions of types of packaging.
